Qualitative Studies in Quality of Life Graciela Tonon 2015-01-14 This volume explores the use and relevance of qualitative methods for the study of quality of life. It analyzes the role of qualitative researcher and the role of the context and the culture in quality of life studies. It presents the use of qualitative methods in real projects carried out in specific fields: geography, health, community studies, labor life and yoga. Finally, the book proposes the use of mixed methods that are considered as the third methodological approach in social research. The main purpose of using qualitative methods is to understand what it means for participants to be involved in certain events, situations and actions. Such methods help understand the context in which participants act and the influence of that context on their actions. The decision to use a particular methodology implies a philosophic, theoretical and political decision. Qualitative methodology constitutes an approach that is essential for understanding people's experiences of well-being and discovering new issues related to quality of life.

Schooling for Sustainable Development in South America Maria Lucia de Amorim Soares 2011-08-24 This book supplies both empirical evidence and scholarly analysis that exemplify successful innovation in South America in the field of sustainability education. Examining the issues from a three-fold perspective, of national policy, regional planning and grassroots projects in schools and communities, the volume offers a comprehensive overview of the contemporary situation in Brazil, Chile, Bolivia, Argentina and Venezuela. It provides case studies as detailed illustrations of the recipe for success as well as to inform researchers and practitioners of the kinds of obstacles and challenges they might face in seeking to manifest sustainability. A good deal of the research and scholarly studies in the field of education for sustainability and sustainable development is underpinned by 'Western' norms and culture. This book draws on that literature, yet also teases out features in the case studies that are particular to the region. South America itself encompasses a rich variety of natural and cultural environments—within individual nations as much as continent-wide. This diversity is a recurring theme in the book. The volume's three sections provide first a general survey, enriched with material from studies conducted in a number of different polities. The second section covers developments in Brazil, South America's largest nation and one that exhibits many of the features of education for sustainability found across the continent. Part three sets out and explores future trends. As with other books in the Schooling for Sustainable Development series, this volume will add impetus to scholarly exchange as well as contributing insights on education policy and curriculum changes across South American communities that exist in an increasingly globalized world.

Space and Time in Mediterranean Prehistory Stella Souvatzi 2013-10-15 Space and Time in Mediterranean Prehistory addresses these two concepts as interrelated, rather than as separate categories, and as a means for understanding past social relations at different scales. The need for this volume was realised through four main observations: the ever growing interest in space and spatiality across the social sciences; the comparative theoretical and methodological neglect of time and temporality; the lack in the existing literature of an explicit and balanced focus on both space and time; and the large amount of new information coming from prehistoric Mediterranean. It focuses on the active and interactive role of space and time in the production of any social environment, drawing equally on contemporary theory and on case-studies from Mediterranean prehistory. Space and Time in Mediterranean Prehistory seeks to break down the space-time continuum, often assumed rather than inferred, into space-time units and to uncover the varying and variable interrelations of space and time in prehistoric societies across the Mediterranean. The volume is a response to the dissatisfaction with traditional views of space

and time in prehistory and revisits these concepts to develop a timely integrative conceptual and analytical framework for the study of space and time in archaeology.

Psychology of the Image Michael Forrester 2012-12-06 Psychology of the Image outlines a theoretical framework bringing together the semiotic concepts developed by Charles Peirce, the sociological insights of Ervin Goffman and the psychoanalytic ideas of Jacques Lacan. Image studies in fashion, advertising, photography, film studies and psychology have been influenced by these theorists in significant ways. The framework presented helps the reader understand how these ideas relate to the study of different domains of the image: the internal imagery of dreams, external images such as the photograph and image processes which span both contexts, e.g., images we have about ourselves. The topics discussed are organised into three themes. The first considers mental imagery, including sound and dreams. The second addresses the interdependent nature of internal and external images, e.g., the gendered self and social identity. In the third theme, attention turns to external images including television, film, photography, the computer and the internet. Psychology of the Image will be of interest to undergraduates, postgraduates, lecturers and researchers in the fields of psychology, media studies and sociology.

Social Network Analysis in Construction Stephen Pryke 2012-04-20 The objective of the book is to make accessible the ways in whichsocial network analysis (SNA) may be used to observe, monitor andanalyse systems and relationships in major construction projectcoalitions. Although this has been an established analyticaltechnique in the US for some time, it is only now being developedin the UK. Having spent nearly two decades investigating major projectrelationships using SNA, the author has brought togethermathematical and sociological methods, and major

projectrelationships in a manner that will inspire both academic interestand a desire to apply these concepts and techniques to liveconstruction projects. Case studies include projects from two ofthe UKs largest property developers, the UK Ministry of Defence anda County Council. SNA is innovative - but potentially inaccessible to projectmanagement analysts and practitioners. This book will provide clearand relevant explanation and illustration of the possibilities ofusing SNA in a major project environment. In addition to offering the potential; for sophisticatedretrospective analysis of a wide range of systems associated withconstruction and engineering project coalitions, the author looksat how we might apply the network analysis findings to the designand management of project and supply chain networks.

Social Isolation in Modern Society Roelof Hortulanus 2006-06-28 Social isolation has serious repercussions for people and communities across the globe, yet knowledge about this phenomenon has remained rather limited – until now. The first multidisciplinary study to explore this issue, Social Isolation in Modern Society integrates relevant research traditions in the social sciences and brings together sociological theories of social networks and psychological theories of feelings of loneliness. Both traditions are embedded in research, with the results of a large-scale international study being used to describe the extent, nature and divergent manifestations of social isolation. With a new approach to social inequality, this empirically based study includes concrete policy recommendations, and presents a clear insight into personal, social and socio-economic causes and the consequences of social isolation.

Subject Leadership and School Improvement Hugh Busher 2000-11-17 Curriculum and subject leadership in schools has recently gained substantial attention from both researchers and policy-makers. The Teacher Training Agency (TTA) has reinforced the importance of subject leadership in school improvement, proposing a new measure of such leadership competence through the creation of national subject leader standards (NPQSL). Subject Leadership and School Improvement reflects critically on the work of subject and curriculum leaders especially in schools in England and Wales, that is, those within the policy framework of The National Curriculum and the Teacher Training Agency. The book debates the functions of subject leaders in primary and secondary schools, using current research-based conceptual frameworks, and considers how they can bring about improvement and change with their colleagues in their subject areas. It emphasizes what is particular about leading and managing the middle realm of education organizations, showing how structural, cultural and individual imperatives and perspectives interact with each other in the professional practice of being a subject leader. The book is of interest not only to subject leaders and curriculum co-ordinators, to help them reflect rigorously on their practice, but also to those responsible for supervising them, such as headteachers and school governors, as well as for those accountable to them. It will be a useful text for serving teachers undertaking higher degrees programmes or programmes for gaining national standards qualifications, the National Professional Qualification for Headteachers (NPQH) as much as for the NPQSL (National Professional Qualification for Subject Leaders) when it is implemented.
