Collector's Originality Guide Ford Model A Jim Schild Collector's Originality Guide: Ford Model A is the definitive guide to one of the greatest cars in American history: The Ford Model A. The successor to the ubiquitous and world-changing Model T, the Model A arrived on the scene in 1928 to considerable fanfare, thanks to the marketing genius of Henry Ford. And this much-hyped car delivered exactly what the public wanted: a solid, reliable, up-to-date--and beautiful--new car. Naturally, this car became an instant classic, and has been a favorite among collectors and restorers for decades. In this paperback reissue of the highly popular hardcover book, author and photographer Jim Schild walks through all of the details of the Model A's four-year production, providing collectors with everything they need to know to identify, classify, and restore these fabulous cars. Filled with gorgeous color photography, this book has been and continues to be a must-have for all Model A fans.

Trucks of the Soviet Union: The Definitive History Andy Thompson 2017-12-28 When the Communists raised the red flag over Russia in October 1917, they inherited a country with virtually no truck industry. Britain, Germany, America and France had factories mass producing trucks; the Russians had a few tiny assembly plants, bolting together imported components. By the time of the Soviet Union's demise at the end of 1991, its engineers, designers and workers had created one of the world's largest truck industries. To do that, they had faced and overcome huge challenges. The Soviet Union's communist system was the world's first attempt to create a new type of society, one that rejected the often chaotic and unstable rules of capitalism. For more than seventy years, trucks in the Soviet Union were designed and built to be part of a vast planned and ordered transport system, interacting rather than competing with trains and waterways. Each factory built specific trucks with their own roles to play in the grand design of the planned economy. Politics and revolutionary expediency were never far from the design studio, or the shop floor, making this a story as much about a nation as it is about an industry. The vast natural environment also played its part. Soviet truckers were faced with driving huge distances across a landscape that included some of the coldest and hottest places on earth, a country that spanned Europe and Asia, the Artic Circle and the Caucasus region. Service stations and motorways were few and far between in such a huge country, making reliability and serviceability far more important than driver comfort. Trucks of the Soviet Union recounts how the truck industry helped build Soviet industrial might, shares the chaos and pain those proud truck makers suffered after the hammer and sickle was hauled down from the Kremlin flag poles and reveals the newly confident and buoyant truck industry that has risen from its post-Communist ashes to become a part of a newly resurgent Russia.

From the American System to Mass Production, 1800-1932 David Hounshell 1985-09 David A. Hounshell's widely acclaimed history explores the American "genius for mass production" and races its origins in the nineteenth-century "American system" of manufacture. Previous writers on the American system have argued that the technical problems of mass production had been solved by armsmakers before the Civil War. Drawing upon the extensive business and manufacturing records if leading American firms, Hounshell demonstrates that the diffusion of arms production technology was neither as fast now as smooth as had been assumed. Exploring the manufacture of sewing machines and furniture, bicycles and reapers, he shows that both the expression "mass production" and the technology that lay behind it were developments of the twentieth century, attributable in large part to the Ford Motor Company. Hounshell examines the importance of individuals in the diffusion and development of production technology and the central place of marketing strategy in the success of selected American manufacturers. Whereas Ford was the seedbed of the assembly line revolution, it was General motors that initiated a new era with its introduction of the annual model change. With the new marketing strategy, the technology of "the changeover" became of paramount importance. Hounshell chronicles how painfully Ford learned this lesson and recounts how the successful mass production of automobiles led to the establishment of an "ethos of mass production," to an era in which proponents of "Fordism" argued that mass production would solve all of America's social problems.

Chrysler, Ford, Durant and Sloan H. Eugene Weiss 2003-08-27 The American automobile industry has been called the favorite child of capitalism. Four decades of exceptional earnings allowed Henry Ford, Walter Chrysler, William Durant and Alfred P. Sloan (both of General Motors), and their companies to make developments in production, design and marketing that have set the standard for consumer products and industrial firms. Four men are primarily responsible for these concepts and for the formation of "the big three." New research lends important insight into the relationship of Walter Chrysler's business career to the careers of the other three automotive giants. This comparative study details the career histories and visions of each of the men, exploring their individual business methods, the innovations for which they were responsible, and their impacts on the industry.

Edsel Ford and E.T. Gregorie Henry Dominguez 1999-06-30 The relationship that developed between Edsel Ford and E.T. "e;Bob"e; Gregorie (Ford Motor Companys first design chief) was unique in automotive history. Gregorie leaned heavily on Edsel for his support and protection, and Edsel depended on Gregorie for his creative abilities. Edsel Ford and E.T. Gregorie is the first book to provide in-depth analysis of how the early Fords, Mercurys and Lincolns were designed. Based on first hand discussions with Gregorie, author Henry Dominguez covers every major design of Gregories career. Automotive historians have listed the 1936 Zephyr, 1938 Zephyr, and 1939 Continental as Gregories greatest achievements. This book details the hows and whys of every Ford product designed under his tutelage.
