**Economics in One Lesson** Henry Hazlitt 2010-08-11 With over a million copies sold, *Economics in One Lesson* is an essential guide to the basics of economic theory. A fundamental influence on modern libertarianism, Hazlitt defends capitalism and the free market from economic myths that persist to this day. Considered among the leading economic thinkers of the “Austrian School,” which includes Carl Menger, Ludwig von Mises, Friedrich (F.A.) Hayek, and others, Henry Hazlitt (1894-1993), was a libertarian philosopher, an economist, and a journalist. He was the founding vice-president of the Foundation for Economic Education and an early editor of *The Freeman* magazine, an influential libertarian publication. Hazlitt wrote *Economics in One Lesson*, his seminal work, in 1946. Concise and instructive, it is also deceptively prescient and far-reaching in its efforts to dissemble economic fallacies that are so prevalent they have almost become a new orthodoxy. Economic commentators across the political spectrum have credited Hazlitt with foreseeing the collapse of the global economy which occurred more than 50 years after the initial publication of *Economics in One Lesson*. Hazlitt’s focus on non-governmental solutions, strong — and strongly reasoned — anti-deficit position, and general emphasis on free markets, economic liberty of individuals, and the dangers of government intervention make *Economics in One Lesson* every bit as relevant and valuable today as it has been since publication.

*The Economy* Core Team 2017-09-21 The only introductory economics text to equip students to address today’s pressing problems by mastering the conceptual and quantitative tools of contemporary economics. OUP has partnered with the international collaborative project of CORE researchers and teachers to bring students a book and learning system that complements and enhances CORE’s open-access online e-book. The Economy is a new approach that integrates recent developments in economics including contract theory, strategic interaction, behavioural economics and financial instability. It challenges students to address inequality, climate change, economic instability, wealth creation and innovation and other problems. It has been adopted as the standard principles course at University College London, Sciences Po Paris and the Toulouse School of Economics. A new economics for the principles course The Economy begins with social interactions using elementary game theory and institutions modelled as rules of the game. This provides the basis for a modern treatment of markets including price-making as well as price-taking, the exercise of power, and the importance of social norms and adjustment to disequilibrium. Introducing labour and credit markets with incomplete contracts allows a consistent treatment of aggregate employment and fluctuations without the need for ad hoc sticky price and wage assumptions. Banks create money by extending credit and a central bank seeks to implement a target inflation rate. Growth and instability are illustrated from the Great Depression, through the post-war golden age of capitalism through to the financial crisis and ensuing uncertainties. Students acquire an understanding of the past and current evolution of the economy in its social and environmental context, equipping them to marshal evidence and articulate positions about contemporary policy issues.

*The Economics of Climate Change in Southeast Asia* Asian Development Bank 2009-04-01 This publication reviews the economics of climate change in Southeast Asia, with a particular focus on Indonesia, Philippines, Singapore, Thailand, and Viet Nam. It confirms that the region is highly vulnerable to climate change, demonstrates that a wide range of adaptation measures are already being applied, and that it has great potential to contribute to the reduction of greenhouse gas emissions globally. It shows that the cost to the region and globally of taking no early action against climate change far outweighs the cost of action. The publication urges Southeast Asia to play an important part in working toward a global solution to climate change, and to apply all feasible and economically viable adaptation and mitigation measures as key elements of poverty reduction and sustainable development strategies. It also argues that the current global economic crisis offers Southeast Asia an opportunity to start a transition towards a climate-resilient and low-carbon economy by introducing green stimulus programs that can simultaneously shore up economies, create jobs, reduce poverty, lower carbon emissions, and prepare for the worst effects of climate change.

*The Commanding Heights* Daniel Yergin 2008-12-26 The most powerful force in the world economy today is the redefinition of the relationship between state and marketplace - a process that goes by the name of privatization though this term is inadequate to express its far-reaching changes. We are moving from an era in which governments sought to seize and control the ‘commanding heights’ of the economy to an era in which the idea of free markets is capturing the commanding heights of world economic thinking. Basic views of how society ought to be organized are undergoing rapid change, trillions of dollars are changing hands and so is fundamental political power. Great new wealth is being created - as are huge opportunities and huge risks. Taking a worldwide perspective, including Britain, where the process began with Mrs Thatcher, Europe and the former USSR, China, Latin America and the US, THE COMMANDING HEIGHTS shows how a revolution in ideas is transforming the world economy - why it is happening, how it can go wrong and what it will mean for the global economy going into the twenty-first century.
